

Play it. Earn it. Own it.

Dogzy Family Universe is an original illustrated world of dog characters, each with a profession, created by the Québec artist Valkyrie (Sania Labbé). It comes to life in *Dogzie Town*, a PlayStation VR game in development, and connects to a real digital token, DOGZY, on Avalanche.

The universe

25+ dog characters with professions: Chef (Golden Retriever), Barmaid (Cavalier), Police Officer (German Shepherd), Firefighter (Saint Bernard), Veterinarian (Labrador), Pilot (Weimaraner) and many more.

The progression

Players level up in each job. **Level 5 of every job is a business:** restaurant chain, bank, clinic, gallery, studio, airport. The first player to reach it owns it; later players buy a franchise. Characters wear equippable accessories.

The game

In *Dogzie Town* (PlayStation VR, in development), players earn in-game Dogzy tokens by working, building businesses and taking part in events.

The token

DOGZY is a standard ERC-20 token on **Avalanche C-Chain**: EVM-compatible, fast and low-fee. The **DogzyBridge** contract lets players move earned tokens out of the game into a wallet they control.

Honest status

- ✓ Smart contracts and deployment script written
- ✓ Compiles; 12/12 automated security tests pass (commit 7cc6717)
- Not yet deployed. Next: Avalanche Fuji testnet
- Game-side signing service to be built
- Independent security audit before any mainnet launch
- Interactive investor demo in development
